

ABSTRACT

Described is an attachable bottle grip for assisting a user in dispensing the contents of a bottle.

The bottle grip includes a patch having an adhesive on one surface for attaching the patch to the bottle. A textured surface on the opposite side of the patch assists the user in grasping the bottle while dispensing the contents of the bottle. The perimeter of the patch can be shaped to match

5 the contour of the bottle. The patch can include a protective layer for protecting the adhesive prior to attaching the patch to the bottle and can be shaped and marked to indicate the contents of the bottle.
